Terminal Disclaimer

The terminal disclaimer filed on 08/10/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent number 6,622,024 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

1. **Claims 1-29** are allowed, **claims 18-29** were allowed by the previous office action.

The following is an examiner's statement of reasons for allowance:

The present invention is a system and method which controls outer loop transmit power for transmission power of an uplink/downlink communication in a spread spectrum time division communication. The system receives a communication from a base station and determines an error rate on the received communication. The system then distinguishes between static and dynamic channels, produces a static adjustment value, and characterizes the dynamic channels to generate a dynamic adjustment value. The target power level is then adjusted by the static and dynamic adjustment values, setting the transmission power level.

Regarding **independent claim 1**, the closest prior art, Hong (US 6,298,241) shows a similar method of performing power control using outer loop power control of a reverse link that sends transmission signals from mobile station to base station. However, Hong fails discloses or fairly suggests a method and system for controlling outer loop transmit power comprising the steps of: receiving at the UE a communication in the form of a series of communication segments from a base station; analyzing the received communication within first and second composite windows; periodically distinguishing between static and dynamic channel conditions in communication segments within the first and second windows; generating a static adjustment value when the respective channel conditions of the communication segments in said first and second windows are different; and adjusting the target power level in response to the static adjustment value.

Claims 2-17 are allowed by virtue of their dependency on claim 1.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
